A dynamic and flexible organisation With our long tradition as a family enterprise we have always been very flexible. Our niche market policy places our activity in the field of small and medium batches and highly complicated parts. We attach great importance to maintain and to enhance our strengths: rapidity, flexibility, quality and reliability. Specific formed parts Formed parts, made of iron chrome-nickel steel or special alloys In order to meet the specified properties with precision, it is necessary to select appropriate powders. We manufacture complex parts with

close tolerances (IT9) in a single compacting operation. Even closer tolerances (IT7) can be obtained by means of an additional calibrating (compression) step. In either case, any kinds of secondary operations (mechanical, chemical, thermal) can be carried out without any problem.

Specific formed parts

Tungsten heavy alloys RECONIT® and W-Ni-Fe alloys

Sintered filters made of bronze

Sintered filters made of chrome-nickel steel

Silencers for compressed air systems PorSilent®

Soft magnetic materials
