From own experience More than 45 years of know-how of machine construction, especially in fields of packaging, find reflex in our comprehension of quality and performance. The owner is in the same time also a chief business executive, so that we see in our costumers always and first of all partners. It is good for both of us! From single source The high percentage of own components in our products allow us offering rapid and individual solutions. Reliability, flexibility and compatibility of our facilities provide with smooth proceedings and maximal efficiency. In favor of you! From conviction We stand by Germany as location. It offers a maximum of product and manufacturing quality. It is a matter of course for us to create a professional perspective for young people. That is why we are also occupied in professional formation. In favor for all of us! Products Our main task consists in development and production of filling and closing machinery, and also the manufacturing of individual format sets and cups for the packing guidance. All products are featured by the highest quality, reliability and efficiency. All our products are compatible the one with the other. We produce consciously and exclusively in Germany. The very high share of own components allows us to offer at any time and within the shortest delays

individually customized solutions. Screw cap closers Whatever may be, spray bottle, crucible or canister, screwed, banded or originality closure - we will turn them their head! Fillers If foaming, liquid or paste-like, if ampoule, tube or bottle, whatsoever - we will fill them their neck! Format sets If plastics or stainless steel, if 6, 12 or 24 stars - we will provide you a good position! Service Best would be yesterday and without any costs.

That is what we do not and will not promise. Good service means for us that you always will have to do with a personal and competent partner - no matter if for any general product information or within the frames of a particular project realization. Good service for us is also cost transparency, trustworthy confirmations of appointed dates and customer oriented solutions - before, during and in the following after the individual production period. That means that a project does not begin with the first welding seam, nor does it finish with the last one.

A detailed analysis of the needs determines the planning forefield. Installation and handover of the facility, the competent instruction, as well as the production of the regular maintenance works by members of our team will ensure your permanent contentment in the future. In reality, our high challenge of quality has only one disadvantage: As a rule and as a result of the high quality, you surely won't have the opportunity to familiarize with our customer service. It is simply impossible to have everything...
