The engineering service in the field of tension between electrical engineering and software application, ie for the automation of your processes, that is our core competence.

The engineering service in the field of tension between electrical engineering and software application, ie for the automation of your processes, that is our core competence. We distinguish between

Planning studies + concepts + consulting
Projecting device selection + execution documents + software applications
Service Remote maintenance + On call +

Regular maintenance

automation equipment

The turnkey delivery of complete automation solutions, precisely tailored to your needs, with an optimal price-performance ratio and the combination of the most modern device technology distinguishes us as a vendor-neutral system

integrator.
Workshop production LV switchgear + special control cabinets + control desks
Mondays sensors + actuators + box assembly
Commissioning

Parameterization + Signal checks + Functional test

Level 2 automation

For many companies, it is increasingly important to take the factory and process automation of their production to the next level. For the detection of weak points, for the monitoring of energy and quality data and the link to the commercial processes, the data from the production are indispensable. We help you to collect data from your production, we offer you modern storage and evaluation strategies and thus close the gap between production and administration.
