For decades, G. BOPP + CO. AG has been a world leader in the production of steel mesh for challenging and diverse applications. When the business was founded back in 1881, it was all about the production of high value, robust and reliable screens and filters; today, our meshes are often vital components in highly complex processes, both in industry and in the field of research and development.

G. BOPP + Co. AG is one of the world's leading producers of precision woven wire meshes, with branches in Switzerland, Germany, England, Italy, Sweden, USA, Korea and China. Fabricated products are utilised in almost all areas of industry, including chemicals, pharmaceuticals, glass, ceramics, plastics, mechanical engineering, paper, environmental technology and even space travel.

Applications + Products Our comprehensive product portfolio includes applications in the most diverse sectors. We are happy to advise on your individual challenges. Please take a closer look here.

## Applications

Shielding Acoustics Vehicle Construction Chemistry / Pharmaceuticals Consumer Electronics Design & Architecture Energy Technology Food & Beverage Conveying Green Tech Extrusion Aviation and Aerospace Mechanical

EngineeringPetrochemistryShippingScreen PrintingSpecial ApplicationsWater Filtration The potential range of applications for our meshes is virtually limitless. Across the globe, many well known organisations from the most diverse branches of industry and commerce place their trust in BOPP meshes. The following presentation is therefore not exclusive but gives an impressive overview of some of the more typical applications.

ProductsBOPP manufactures a comprehensive range of fine wire meshes incorporating specific properties for the most diverse applications. For more challenging filtration applications, we sinter multiple layers of mesh using heat and pressure to provide multilayer filter laminates. Our precision woven steel meshes are supplied in roll form or as fabricated products manufactured to individual customer specifications.
