We set the standard through innovation and reliability in the following three areas. Whether for railways, trams or trolleybuses – Kummler+Matter Ltd. is your professional partner for overhead contact lines. We provide services that support your contact lines throughout their entire lifetime. From initial project studies, engineering, supply and delivery of materials and equipment through to installation, service and maintenance.

Products of overhead contact lines

Together with long-standing partners and suppliers, we continuously develop our systems and products to improve as well our performance and safety as the durability - in order to ensure a life long service life of your overhead contact line.-
KUSEC Section insulator 1.5 and 3 kV DC- KUSEC Section insulator 25 and 15 kV AC-
KUDISC Tramway crossing- KUPRO De-icing system 1.5 kV DC- KULOOP Loop-insulator- KUMAK Multi-track-cantilever with fast-release wedge connector

The Kummler+Matter product house. We develop new and modify existing products in our own product development department. Everything with and for the customer. In doing so, we rely on our good customer relations and, whenever possible, brings

the customer on board with regard to a sustainable feedback. This results in marketable products at a high level. For example, an automatic earthing safety control system, a new multi-track-cantilever, a modified de-icing system and the newly designed section isolator family for trams (1.5/3 kV DC) and railways (15+25 kV AC/3 kV DC) named KUSEC.
