INTERNORM is your specialist for customized polyurethane and thermoplastic plastics technology. Since 1987, we have been developing and manufacturing cast and injection-moulded parts, high-quality roller and roller coatings in Damme.

From the idea to the series
Consulting
We listen, ask the right questions and develop solutions that meet your exact requirements. Together, we discover new potential for innovation in your

industry.
Research and Development

Our team of experts is driving development forward. We research, test and optimize

until the perfect material and process solution is found.
Design and Toolmaking
Precision is our standard. Using the latest technology, we design the tool for your

component and implement it in our in-house toolmaking.
Manufacturing
In series production, everything comes together. We produce your component efficiently, reliably and in consistently high quality.

The right one for every requirement
proceedings
Whether it's a prototype, small series or the production of hundreds of thousands of parts — we master a wide range of manufacturing processes. This gives you maximum flexibility and the security of always getting the best technical and economic solution for your project.

Now is the right time to discover the ideal process for your idea. Casting
prototypes, preliminary & small series
up to 1,000 pieces
This process enables complex components to be manufactured

quickly and cost-effectively, even without high tool costs. Injection Moulding series production starting at 1,000 pieces The solution for maximum precision in series production. We produce large quantities of consistently high quality. Assemblies Small series to large series

We assemble ready-to-install components for you — including purchased parts, surface finishing and final testing. Impulse generator for strong industries Every industry has its own laws. We understand the specific challenges and opportunities — from agricultural technology to the food industry. This not only gives you custom-fit components, but also a decisive innovative advantage.

Agricultural Technology

Our robust plastic components enable innovative solutions for modern agriculture.

Food Industry

We develop components that meet the highest hygiene standards and are certified for contact with food.

Construction Machinery Industry

Our components withstand the harshest conditions. This gives you more durable and efficient construction equipment.

Conveyance

Our wear-resistant and slide-optimized components ensure a smooth flow of materials and enable low-maintenance conveyor systems.

Mechanical Engineering

Precise plastic components for the highest mechanical demands and more powerful and longer-lasting machines.

Roller

Development and coating for a wide range of applications: gentle material transport and specialized painting or rubber rollers.
