Experience and expertise in single-part production and small-series production F&S Elementebau GmbH, based in Neuenstadt am Kocher near Heilbronn, has been offering experience and expertise in single-part and series production since 2002. We machine and assemble all parts for our products in-house, in our own production facility. Furthermore, we have sufficient capacity for additional contract work – from single-part to series production. The clearly defined concept of our master craftsman company near Heilbronn meets the diverse requirements for winding, rewinding, and unwinding clamping systems for cores and spools across all relevant industrial sectors. Ensuring absolute functional reliability of both pneumatic and manual units is our top priority. With just four basic design principles, we cover all technical requirements. This enables us to offer cost-effective single-part and series production. We keep our high-quality functional modules in stock at all times in a compact warehouse. The modular components can be adapted to customer-specific requirements within a short time – this is the secret behind our short delivery times. LEISTUNGEN Clamping and winding shafts CNC Machining Assembly of components CAD Design 3D Printing Mechanical or pneumatic clamping bar mandrel with continuous clamping bars.

Ideal for various core widths.

Reel for winding and unwinding coreless coils. Ideal for feeding, for example, fully or semi-automatic punching presses.

Pneumatic clamping bar mandrel with spring-loaded action – the uncompromising safety clamping system. Modern Machines for Sophisticated Products We offer a state-of-the-art machinery park for the production of complex parts in various dimensions. Our focus is on individual parts and small to medium series. By using CNC machines across all production areas, we ensure efficient processing and the highest quality standards. Our core competencies include milling, turning, and drilling – though we are also equipped for a wide range of other machining operations. Thanks to the CNC capacities listed below, we are able to offer you machine parts and complete, ready-to-install assemblies at an excellent price-performance ratio. To save you time and money:

- We manufacture individual parts and assemble them into complete units using supplied components.
- We are also happy to take on assembly, preparatory and follow-up work, as well as related finishing tasks. This enables us to deliver complete assemblies and relieve our customers of the effort involved in purchasing, scheduling, and warehousing components.
