Corvus coating systems GmbH

The special strengths of Corvus Beschichtungssysteme GmbH are the specialization in coating technologies for the production of SD papers and the high flexibility. This makes it possible to develop applications and solutions together with the customer, but also to offer expert assistance with application-oriented product developments on the customer side and to serve niche markets. Due to its technical possibilities and experience, Corvus Beschichtungssysteme GmbH has achieved a special position in the market, even though no standard SD papers are offered. In addition to the SD products, its core business includes the manufacture of capsules, the encapsulation of other ingredients and individual finishing orders. In addition, accessory products are offered and various carbon paper and carbonless copy variants are produced, in particular by the sister company founded in 2003 Corvus-Hauffe Paper Coating GmbH.

Interform stripe writes where you want! Interform stripe: A development for special form applications. Interform stripe: Does it work after kinking! Interform: Write on

labels. Whether CB 70 g / m² or CF / CF 240 g / m², Corvus produces what you are missing. Clever niche products from Corvus let the end user save money.
