For more than 100 years Rehm is using the technical progress consistently in order to develop new and improved manufacturing methods to produce high quality products - for the benefit of our customers. Today Rehm is the specialist for custom-made, custom-designed applications. Since our inception, we strive to provide our customers not only the pure technology, but also to offer our best service. With the know-how and the friendliness of our staff we plan your project and work quickly, reliably and competently. We draw our knowledge not only of the numerous successfully completed projects, through training courses we are always on the actual state of technology. For more information about Victor Rehm products, please follow the links below. Punching & Forming Based on experience from more than 150 years in the metal processing, we develop with our customers and external competence centers solutions to a broad range of applications in various industries. Our goal is to implement the specialties of our customer's complete satisfaction. Our project management tool is a classic design with 2D and 3D CAD and several stamping presses up to 630 kN.

Hybrid Technology Already in 1977 REHM produced the first hybrid part. At this time it was a simple contact spring set for an electronic toaster, now we provide a variety of custom-molded parts in conjunction with our precision-punching, bending

and deep-drawn components for a wide range of applications, such as
Connectors Switches Airbag systems Sensors Spring sets of relay
Programming pins Holders, socket for lights and LED's Whether it is "Reel to Reel"
or inserts - from raw material to the complete component. When you get REHM
Everything from one source!
