eptotec, the specialist for enamel and gear pumps, In the year 2000 optimized the diameter of its gear melt pumps. The following advantages result from this; Volume reduction and thus a higher flow rate and shorter residence time! The eptotec melt-X gear pump series with its dead zone-free, rheologically optimized flow geometries guarantees minimum product residence times, uniform flow velocities without wall adhesion or discoloration of the melt. Especially well suited for frequent color changes or product changes. The filling and squeezing grooves of the eptotec plain bearings are perfectly matched to the interventions of the teeth, Tooth base to head from the mating wheel. This will be the most gentle and complete Squeezing reached. So the slightest shearing and friction is produced and the best Self-cleaning achieved. That's the unique thing about the eptotec melt-X. eptotec offers comprehensive advice, services and spare parts for gear pumps in polymer processing extrusion, thermoplastic processing. Take advantage of our leading know-how for the products melt-X, elast-X and m-pac! In addition, we also offer our services and spare parts for the gear pumps of

other manufacturers. This includes:Advice and spare parts for gear pumps of the  
most famous manufacturersRevisions of gear pumps of the best known  
manufacturers
