Since 2001, our company has specialized in the manufacture of multi-core cables, individual cables and complete cable sets. With our newly purchased machines, we can expand our manufacturing capabilities for our customers.

We work for our customers in the following areas: individual production
Prototyping / development
series production
assembly
Production in contract work (blanks, crimps, etc.)
Apparatus and apparatus construction
plant construction

In assembly, we are flexible for our customers. We complete your assemblies with our prefabricated cables, so you only need to use the modules on site and make the connections to the device. We also gladly take on the complete procurement of individual parts for our customers, such as sheet metal parts, mechanical connections and, of course, the cables to be assembled, so that we can offer you a complete solution for your module.

We process for our customers crimp contacts of all commercially available manufacturers, such. TYCO, JST, MOLEX, Harting, GERMAN, Phoenix and many others. The contacts are processed with tools from Hanke, these tools are flexible to

adapt to various contacts. We process isolated and uninsulated contacts.
