Our engineers and scientists consult on, plan, build, and maintain water treatment plants that are tailored to the respective customer requirements. Plant solutions for water recycling, resource recycling, zero discharge requirements or biogas production save valuable resources and energy. We supply plants "Made in Germany" to customers around the world. You can focus your whole attention on your responsibilities in production or manufacturing. We look after the safe treatment of water and wastewater on your behalf. For more than 40 years, we have been constructing and operating water treatment plants. We incorporate our many years of experience in the industry, with its wide range of production processes and demands on water technology, into the development of customised plant solutions. With our EnviroChemie plants, we not only provide the required water qualities, but also pay attention to energy efficient and resource-saving methods and plant components. Consultancy We are your partner in all questions relating to industrial water treatment. We are pleased to advise you on all questions relating to water treatment. Do you need a specific water quality for your production, want to save water and energy or have to clean wastewater to predetermined limit values? Then ask your experts for advice. We can discuss the steps required to implement

plant technology that is tailored to your needs, either on-site or at our headquarters. **Planning**We carry out the planning for your water treatment, circulation and wastewater treatment plants. We start with basic planning. The characteristics identified results of laboratory and pilot tests, structural prerequisites and other customer requirements, are incorporated in the definition of the technological process and the main components of the plant technology. **Construction**Our production facilities are located in Germany and Switzerland. Key process components such as pumps, valves, taps, measurement and control equipment are supplied by leading German and Swiss providers. We can build plant technology that precisely meets your needs, whether you require a plant for water treatment, water recycling or waste water treatment to be built from scratch, expanded or upgraded. Our plants are produced by certified and qualified personnel, using the most modern production methods. The EnviroChemie plant technology is characterised by the long service life and high energy efficiency of the components and processes used. **Customer services**Maintenance, service and repair for your industrial wastewater treatment: Our customer service team is at your disposal for all questions relating to your plant. Here at EnviroChemie, we have a tradition of setting high standards for the quality and durability of water and wastewater treatment plants. We have our own team of technicians and offer a comprehensive range of services, ensuring that your plants run smoothly and are expertly maintained. Please contact us for more information. **Operation management**Reduce your costs while maintaining your plant at a consistently high level of quality, and rely on our many years of experience in operation management. Concentrate on your production process, while we look after the operational management of the water treatment plants. We take on the entire water management of your process water treatment, cooling water treatment, and wastewater treatment plants on your behalf. **Water treatment products**We optimise

your processes relating to water treatment, cooling water treatment and wastewater treatment and supply you with exactly those water treatment chemicals that are best suited for your needs. Chemicals and consumables for optimal treatment of water, cooling water and wastewater. We only use products that have repeatedly proven their efficacy in our own laboratory, technical centre and in practice.
