The ICE BULL Dry Cleaner - Power Cleaner is a new, innovative dry ice blasting machine Mini, which can be operated with an air consumption of 0,5 m³ / min at starting at 2 bar jet pressure. This completely redesigned dry ice blasting device can be used from 0.5 bar to 10 bar air pressure with high efficiency and low noise, even in a noisy work environment more sensitive - between 55 to max. equivalent to 85 dBA what the volume of an air gun. The maximum air consumption of the dry system at 6 bar operating pressure is modest 1.5m³ / min.For direct drive of the rotary feeder from the dry ice blasting unit a standard power supply of 220V / 50Hz is required. The compact dimensions of these mini-beam unit B H x 30cm x 50cm. The dry cleaner is made of stainless steel in an attractive race design and has an empty weight of only 14 kg.The dry ice consumption is 250g / min = (15kg / hr.) The dry ice-capacity per filling is 2.5 kg. Refilling is done in a few seconds. The single-tube rotary valves system from the dry ice blasting unit delivers maximum beam power even at low operating pressure.
As blasting media for our dry cleaner commercially available dry Cryo-Pelletts 3mm be used. For a global comprehensive supply of unseremTrockeneisstrahlgerät with dry gas our care partners.
