We specialise in injection moulds to meet demanding customer requirements. We offer very short cycle times, even with a high number of cavities. Our development team looks back on 40 years of experience and works with the latest technologies. Through close contact with the major industry players, we engage in international knowledge transfer.

Plastics-Innovation YOUR PRODUCTION GOALS DRIVE OUR INNOVATION In-house developments in injection moulding technology are part of our unique offering. With solutions for a wide range of requirements, we meet the need for high component quality, uninterrupted production steps and high reliability across the entire life cycle of the products. In order to test performance prior to the build of a production mould – especially in the construction of complex shapes – we use in-house pilot moulds in the design phase. This enables us to carry out practical tests with our full hot runner systems so we can gain a realistic picture of the project feasibility and prevent any surprises during later stages.

Injection-Moulds Drawing on our extensive experience, we can design the right injection mould for every imaginable application. However, there has been a natural process of specialisation in our corporate and technological development. We have gained high-quality expertise in the following

fields: MEDICAL PHARMA / LABORATORY THIN WALL / IML

Technical Competence THE MULTI-DIMENSIONAL THINKING OF OUR DEVELOPMENT AND ENGINEERING DEPARTMENT

Our engineering department has been working on injection moulding technology for 40 years. During the development in this demanding sector, it solved challenges large and small, in very different situations and environments. It is against this background that the solid expertise within our company was developed. At the same time, we have built up a comprehensive network of major plastic producers, injection moulding machine manufacturers and automation technology specialists. This means that we have access to the latest technologies and achievements in the field.
