The surface is much more than what limits a body from the outside. We know about this meaning and we have made it our mission to do our job in each and every one of them. We have made it our goal to modify and improve virtually every material in its properties. This requires absolute flexibility and meticulousness at every stage of the process. This passion accompanies us in the processing of complex individual parts as well as in extensive series production. Good is not good enough for us: On the one hand, to always meet your requirements and on the other hand to develop our production on the other hand, we have implemented a strict and uncompromising quality management with us. For example, we increase the effectiveness and efficiency of our entire range of services, for example through regular audits, training and further training measures for all our employees.

SERVICES: SOLUTIONS We are your specialist for painting of plastic parts and ABS components, plastic coating, plastic painting and water transfer printing. We have made it our goal to modify and improve virtually every material in its properties. This requires absolute flexibility and meticulousness at every stage of the process. This passion accompanies us in the processing of complex individual parts as well as in extensive series production. Where the automation reaches its

limits, we still provide optimal results with expert manual work. In the end, metals as well as plastics either become particularly wear-resistant, dirt-repellent, lubricious, corrosion-resistant, heat-resistant, chemically resistant and simply visually sophisticated.

SURFACE TECHNOLOGY We paint and coat decorative functional surfaces exactly to the requirements of our customers in industry and trade. This allows us to improve virtually every material in its properties - metal as well as plastics. We paint and coat decorative functional surfaces exactly to the requirements of our customers from industry and trade. This allows us to improve virtually every material in its properties - metal as well as plastics. In the end, a component becomes either particularly wear-resistant, dirt-repellent, lubricious, corrosion-resistant or even chemically resistant or simply optically demanding. Our range of products extends from joint planning to the punctual delivery of finished coated products. With our coating and painting technology, we ensure perfect results for the individual part as well as for the series. Where automation reaches its limits, we continue to provide optimum results with expert manual work.

SPECIAL COATING In addition to optical tasks, the surface naturally also fulfills protective tasks for the workpiece, in particular. In two stages, it must first be checked which purpose the workpiece should serve. Thereafter, demands are made on the durability of the coating of the workpiece. In order to be able to define cleanly all coating requirements, five classes of stress are classified. The requirements of the coating can be optimally adapted to the respective intended use of the finished product.

PRINTING PROCESS We can provide your components and materials with special coatings that give them certain additional properties. All types of coatings are conceivable - from classic printing to water transfer, where your painted surfaces are precisely applied to three-dimensional objects. The work with airbrush technique, the classic screen printing and the indirect printing of plastic bodies by

means of pad printing are also part of our extensive portfolio of services.

LOGISTICSWith our own fleet of vehicles, we can take over the entire logistics for our customers on request - just in time and with fixed delivery dates. We can even organize, control and control the entire flow of goods for you. Our offer ranges from the collection and coating of your components over the composition of entire assemblies in our manufacturing facilities to the assembly and finishing of the components manufactured by us. And of course we also take over the packaging and transport of small, medium and large series for you. Naturally, we work in a highly flexible manner in accordance with your requirements: In the packaging area, we offer you the shipment of large batches on Euro pallets as well as the individual packaging of small components in tissue paper.
