BLECHUMFORM YOUR PARTNER FOR PANEL WORKS Welcome to Blechumform GmbH in Felben-Wellhausen / Thurgau In one-of-a-kind or series, you can benefit from over 30 years of know-how in sheet metal forming. Through our own tool making, we can produce cost-effective mold devices. Container, filter, ventilation, Chemineebau, housing, fire bowls, works of art, Garden design, furniture. Precise and economical we produce your products. Products Metal stamping Feuerschalen Metal Sheet forming Metal processing - comprehensive services in a wide variety of applications. Container Filters and Ventilation Cheminee and furnace construction Flat bottoms Cover Konen Arched floors Casing Inlet nozzles Smoke hats Pipe reductions Feuerschalen Compensators Landscaping mechanical engineering Crafts Tabletops Fire bowls hemispheres Peel Metal working Electrical, measuring and control technology Research and Development metal housing Decor and design Feuerschale Blechumform - Fascinating fire magic A crackling log fire has been a great fascination for us humans since time immemorial and arouses positive feelings. Fire warms, brightens and spreads the scent of wood. Guests sit around the campfire watching the flames and inspiring conversations. The stainless steel fire bowl "Blechumform Deluxe" is made of three millimeters thick chrome steel. This fire bowl comes from Swiss manufacture and is a constant value due to

the design and the high quality. The fire bowl "Blechumform Basic" is formed from four millimeter thick steel. This not only distinguishes you from other products with its design, but also impresses with its longevity: 100 percent Swiss Made. Due to the sophisticated design, the fire bowl offers good resistance to the wind and ensures an excellent supply of combustion air.

**Fire bowls** Fire bowl deluxe steel, stand-alone

The Blechumform GmbH a young company in Felben-Wellhausen in the field of sheet metal & metal pressing active. Blechumform stands as a competent partner for precision, quality, flexibility and speed to its customers. Latest technology

The latest technology, performance, quality and know-how are the wishes of our customers in the foreground.

**Metal Spinning** Metal spinning is a manufacturing technique for the deformation and shaping of various metals. The starting material, usually a fixed sheet metal blank, is set in rotational motion. With the help of a spinning roller and a corresponding spinning mold, the desired hollow body parts are produced. With this method, the metal is solidified. There is an enormous savings potential in terms of material and weight.

**Services** High accuracy (object 1200 mm tolerance +/- 1 mm) Diameter up to 2000 mm Mold height up to 1500 mm Material thickness: chrome steel 5 mm / steel 8 mm High surface quality High cutting accuracy Environmentally friendly treatment Stretching and projecting (flowing pressure) Suitable for complex machining processes Metal pressing / deep drawing Punching Shooting Cutting up to a diameter of 2000 mm. Material thickness 6 mm.

We value a high quality standard and punctual delivery. Your wishes come first.
