We offer electrically heated steam generators, which can be combined in the building block principle to stationary or mobile units for the desired capacity range. With our wide range of various standard machines and special products, we can tackle any unusual assignments just as easily as everyday applications. You will receive a steam generator, which has been designed especially to meet your company's requirements, which is economic to run, reliable and flexible.

Steam generators are not specific to any one industry, but were planned as general purpose high-performance machines. They will work for long periods of time with remarkably low heat losses. SPS controls, plus automatic pressure and temperature monitoring ensure low operating costs and maximum efficiency.

Products Steam Generator PS200 Steam Generator PS300 Steam Generator PS400 Steam stations Accessories  
Steam Generator - Casing and Boiler Bodywork

Basic stand and hood of stainless steel, integrated switch box. Singelpart bodywork of stainless steel, 1,457 l., electrically welded. Electrical Equipment Control panel wired to VDE (Verband deutscher Elektrotechniker = Association of German Electrical Engineers), electronically regulations, optical water level display, 400 V, 50 Hz. Gegen Aufpreis auch mit microprocessor pressure regulator lieferbar. Steam stations Because of the individual variety of our modular system it is possible to combine several steam generators. As a result you get a multi-system with a higher steam-output. Example: Stem generator station exist of 3 x steam generator PS400-80, steam capacity max. 336 kg/h, feed water vessel PS0150, drain water vessel, automatic blow down system
