KFN is the only producer of quicklime products in Switzerland. The natural limestone that we have been mining for more than a century at the Elggis mountain in the Swiss canton of Glarus is 98 % pure calcium carbonate. Thanks to a geological oddity, in the Swiss canton of Glarus the oldest sedimented lime layers are to be found on the surface. They are the ones with the largest degree of purity – a considerable success factor of our KFN quicklime products.

Your Advantages  
Product Quality plus incomparable service  
Lime with calcium carbonate content reaching above 99%  
Highest purity, lowest iron and lead content in Europe  
Calcium hydroxide content reaching above 98%, remaining CO<sub>2</sub> <0,7%  
Extra fine calcium hydroxide for faster chemical reactions (100% < 0,02 mm)  
High CaO-reactivity with t<sub>60</sub>-value under 40 seconds  
Highest white level without black spots, 96,8% (Spectro Color, Ry)  
Certified for food, animal

feed and drinking water processes and products according to ISO / FSSC

22000Guaranteed compliance with the highest quality standards through quality management system, ISO 9001 and ISO 14001 certified

Swiss Lime and Gravel Schweizer Kies und Kalk

Swiss Lime

Chemistry & PlasticsEfficient chemical processes and innovative plastics thanks to the incomparably pure hydrated lime from KFN Swiss Lime

Food & MedicineHealthy, enjoyable food starts with white lime from our factory. It has been certified according to ISO 22000 for food and animal feed uses. Swiss

Lime

Industry & ConstructionThe buildings, roads and pathways of tomorrow are built using the finest Swiss white lime-products from KFN. Swiss LimeAgriculture &

EnvironmentSustainable farming and healthy growth made possible using the high quality, pure lime products by KFN.

Swiss Lime

Life ScienceYou will find innovative ideas for health and quality-of-life-products in the pure white lime coming from KFN – lime that has been certified for food and

drinking water uses. Swiss Lime

Gravel products and aggregateHigh-class gravel products from KFN are used as

building material for civil engineering in the construction of highways and roads, for the construction of buildings and in gardening and landscape building.

The demands on industrial processes and products keep growing. When efficient and sustainable solutions are called for, the uniquely pure lime products of KFN play

a significant role.The unique first-class features of our raw lime and the careful processing using facilities that employ the most modern technologies see to it that

our lime is used in numerous fields of application. KFN lump lime, fine white lime and hydrated lime is used either as a raw material or as an agent for pathbreaking

products in fields that range from wastewater treatment to paper pulp

production.Apart from the traditional uses in the steel and construction industries, agriculture and forestry, our assortment of lime products is conquering more and

more future markets. KFN lime from the Elggis mountain in the Swiss canton of

Glarus can play an important role in the production of novel materials, in the health sector or in protecting this world's climate.
