Our company stands for pinpoint accuracy, flexibility and quality.
According to our customers specifications we produce tools and molds. As supplier to the german automobile, machine and plant construction industry as well as to medical and electro technology we are committed to high standards of quality.
Since 1985 we built, repair and optimise:-models
-small and long production run toolsBy takeover of an expierenced metalworking company we have been able to expand our machining abilities to handling large scale workpieces. Therefor we have machining centers with travese path up to X 1800/Y 800/Z 600 mm and automatic lathes with diameters up to 850 mm on our hands.
Construction Our CAD and CAM Department does drawing and designing not only for our own porposes, but also as per customers specifications by skilled designers

and programmers using sophisticated CAD/CAM software. On the basic of customers data our CAD/CAM Department provides component design, constructs congruent injection mould, metal blade electrodes or prototypes Our staff does have wide-ranging expierences in building devices, model-, pre- and large-scale production moulds as well as building punch and forming tools. Based on practical moulding expertise, tool shop collaboration and various methods of test and checking, we will provide an optimized solution to your engineering need. Therby we consider machine and material requirements, ejection needs and - certainly - we garantee appointed deploy scores.We operate with Mastercam and Solid Works 2D and 3D CAD Data in the formats as IGES, DXF, ParaSolid, Step, STL, VDA, DWG, SAT, CATread, NFLPro and some more. Mould productionWe work closely together with our customers to review each detail of the project at the preliminary stage. We bring our experience in product design to every project we are involved. A clear understanding of the customer's objectives combined with our quality procedures, as well as knowledge, and experience enables us to provide services that exceed customer satisfaction. We build all moulds to the exact specification given by the customer and garantee the declared tool life to assure you get the maximum out of your investment.

Plastic ProductsIn plastics sector we produce technical parts with high standards of resistance, dimensional accuracy and quality for OEM-components in dingle, small and large scale production. Our services cover all activities from mold design to production, packing and shiping of the serial parts.
